

Breaking the boundaries in textile with a living material called Cork.

Cork is nature's own high-tech achievement. Down to the cell structure, its unique composition and characteristics cannot be replicated by anything man-made.

COMFORTABLE AND WARM FEELING
The natural texture of cork combines softness and flexibility to the touch with a naturally surface.

HYPOALLERGENIC
Because cork does not absorb dust, it helps protect against allergies and does not pose a risk to asthma sufferers.

HIGH FRICTION RESISTANCE AND GOOD RESILIENCE
Cork is extremely resistant to abrasion and has a high friction coefficient. Thanks to its honeycomb structure, its resistance to impact or friction is greater than that of other hard surfaces.

Sharing passion by nature and innovation

A unique partnership has been set up with 2 companies with diferent business, but with the same passion, for nature and innovation.

With the scientific support of Citeve and Porto University we were able to develop innovative and high-performance products that simultaneously incorporate the properties of textile substrates at the level of comfort, touch and appearance and functional cork surplus value.

Achievements

- 2015**
> INOVATÊXIL 2015 prize, in the category of product of the year (ItechStsyle Forum, Modtissimo);
> Selected as finalist for the Future Materials Award 2015 in the Sustainability Category
- 2019**
> Selected as finalist for the iTechStyle Awards 2019, in the product category (ItechStsyle Forum, Modtissimo);

Our Present Future

Why does the world need a new textile material?

3 reasons:
Real love for nature, performance
and sustainability.

Cork is one of Nature's most extraordinary material. 100% natural, recyclable, cork is an inherently sustainable resource, both biodegradable and renewable. The cork oak forests are one, of the 35 most important ecosystems in the world for preserving biodiversity. They are also a natural CO₂ retainer, the major cause of global warming. It is estimated that every year cork oak forests retain up to 14 million tonnes of CO₂, a huge contribution for reducing gas emissions.

We can imagine textiles that are both softer and longer-lasting, offering better protection from a variety of elements.

Our approach is based on the knowledge that textiles, throughout its life cycle, has a huge relevance on environmental impacts. We are committed to ensuring that our products extends their function as far as possible.

We are Spinning the future of high performance sustainabe fabric

We are part of an evolutionary path where new processes and technologies are constantly being developed. Every day we are inspired by the amazing materials we work with and driven by the desire to turn these materials into amazing products.

The combination of cork awaken our creativity, resulting in a sustainable field of visuals and performance. Our innovative production methods have made it possible to join fabrics with sustainable cork to create a range of exquisite textiles.
